DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 19-23, 26, 29 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. A "computer program product" is non-statutory.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-13, 19-24, 26, 27, and 29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "respective cache" is unclear as to which cache it is referring. For example, the phrase "following a failure of one of the clusters, using the track control blocks of the surviving cluster to rebuild the data structures for the respective cache" (claim 1) is unclear as to whether "the respective cache" is referring to the cache belonging to the failed cluster or the cache belonging to the surviving cluster. According

to the specification, "the respective cache" seems to be referring to the cache belonging to the surviving cluster, and it is recommended that the phrase be changed to show this.

Allowable Subject Matter

Claims 14-18, 25, and 28 are allowed.

Claims 1-13, 19-24, 26, 27, and 29 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: The statement that the data structures describe cache data, the track control blocks are contained within the data structures, and that after the failure of the cache in one cluster, the track control blocks within the surviving cluster are used to rebuild the surviving cluster's data structure.
